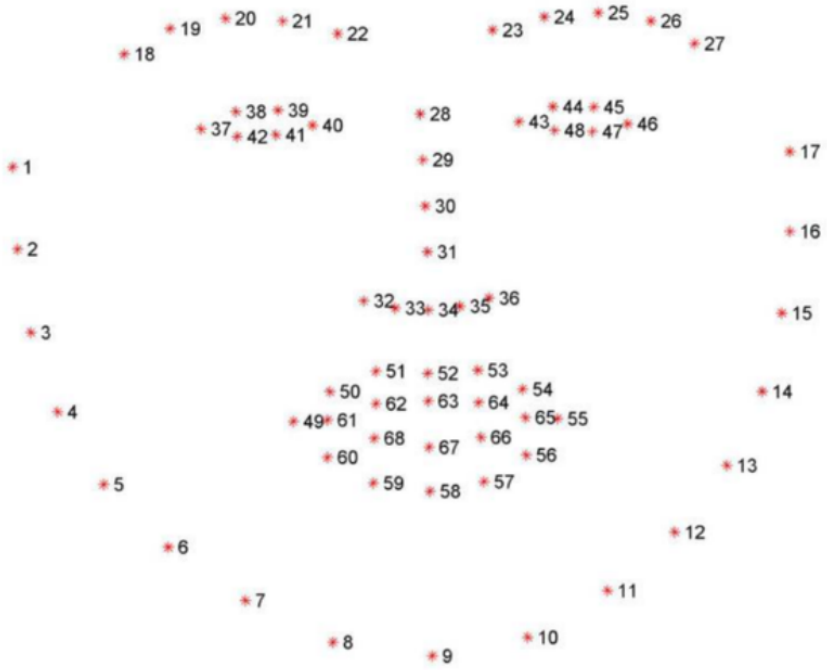
4.Face detection

4.1 Dlib

DLIB is a modern C++toolkit that includes machine learning algorithms and tools for creating complex software in C++to solve real-world problems. It is widely applied in fields such as machines, embedded devices, mobile phones, and high-performance computing environments in the industry and academia. The dlib library uses 68 points to mark important parts of the face, such as the right eyebrow at 18-22 points and the mouth at 51-68 points. Get the dlib library_ Frontal_ Face_ The detector module detects a face, causing a shape_ Predictor_ 68_ Face_ Landmarks. dat feature data predicts facial feature values.

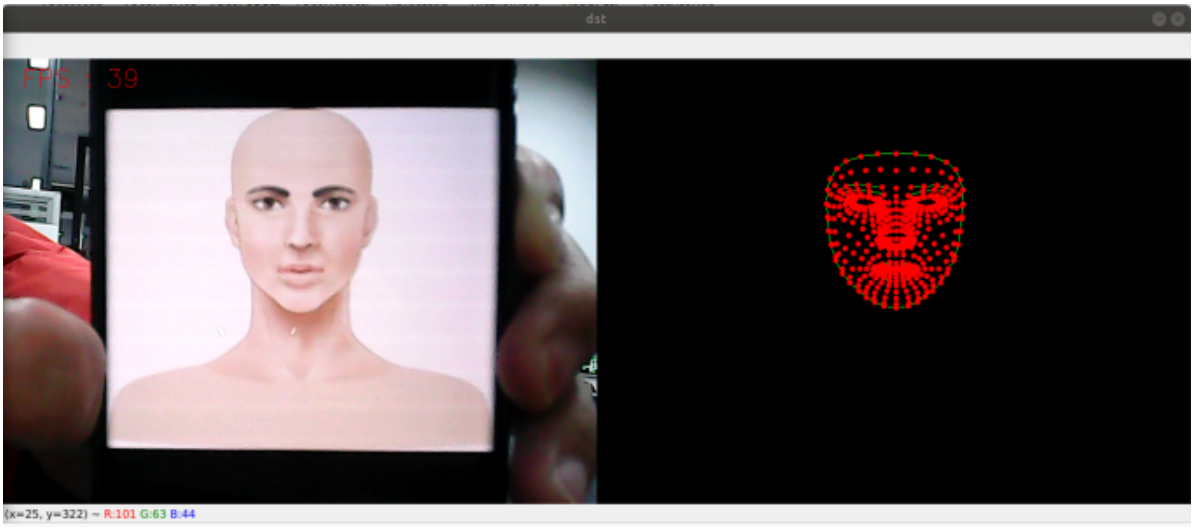


4.2 Face detection

1) Start

Input following command:

```
roscore
rosrun yahboomcar_mediapipe 04_FaceMesh.py
```



2) Code

Code path: /home/yahboom/orbbec_ws/src/yahboomcar_mediapipe/scripts/04_FaceMesh.py

```
#!/usr/bin/env python3
# encoding: utf-8
import time
import rospy
import cv2 as cv
import numpy as np
import mediapipe as mp
from geometry_msgs.msg import Point
from yahboomcar_msgs.msg import PointArray
